C&S Wholesale Grocers, Inc. and Subsidiaries

1. Purpose

To define the Information Services (IS) policy and processes for lifecycle management of all IS assets owned, leased, or operated by Information Services and ensure that IS assets are managed in a manner consistent with business and technology requirements throughout their life cycles from acquisition through disposal.

2. Management Responsibilities

It is the manager's responsibility to ensure that his/her direct-report employees, interns, contractors, and/or third-party workers are aware of, and agree to abide by, the Company's requirements for asset management, including ensuring that Company owned or leased IS assets adhere to Company and industry standards, are deployed consistently through the Company, and comply with customer, legal, and regulatory requirements.

3. Asset Management Policy

3.1. IS Tangible Asset Lifecycle

The IS Tangible Asset Life Cycle process consists of the following activities: planning, acquisition, inspection, acceptance, distribution, disposal, and verification.

3.1.1. Asset Planning

The periodic determination of asset requirements will be accomplished as determined by the Chief Information Officer (CIO) and IS Program Office in concert with corporate planning schedules and objectives.

3.1.1.1. Asset Planning for Projects

Asset planning for projects will be accomplished in accordance with Policy CSISSW001, Systems Development Life Cycle and related documents.

3.1.2. Acquisition

The acquisition of assets shall conform to established financial and procurement policies and practices and to procedures described within this policy.

3.1.2.1. Acquisition Approval

Under no circumstances shall new assets be acquired, or existing assets increased/decreased without obtaining the approval of the applicable Information Services VP or the Chief Information Officer. This pertains to both physical and virtual assets including additional CPU, storage, memory, and software licenses, as well as reallocation of existing already purchased/activated, pooled resources.

3.1.2.2. Asset Quotes

When asset quotes are warranted, consideration will be given to leveraging the resources of Strategic Sourcing. If the asset is of a type which Strategic Sourcing currently handles, and if time constraints permit, they will be engaged in this process.

Multiple Quote Requirement

Where possible a minimum of three quotes should be obtained. If time constraints, a limited number of vendors, or contractual considerations such as non-compete clauses make this impractical, every effort will be made to negotiate the lowest possible price from the prospective supplier.

3.1.2.3. Use of Automated Systems

Automated systems for the identification and procurement of assets will be used to the maximum extent possible to ensure a stream-lined, accurate, and auditable process.

3.1.3. Receipt, Inspection, Acceptance, and Distribution (Asset On-boarding)

3.1.3.1. Asset On-Boarding

The receipt, inspection, acceptance, and distribution of IS assets shall conform to the procedures described herein and to other company guidelines and best practices related to these activities.

3.1.3.2. Asset Installation

Only IS assigned personnel or contractors shall install IS assets. Installation of IS assets will be scheduled to minimize interruption of crucial business activities. The applicable Information Services VP will ensure that follow-up is performed with users to verify satisfactory installation.

3.1.3.3. Asset Backup/Redundancy

C&S Wholesale Grocers, Inc. and Subsidiaries

For infrastructure asset installations like network hardware/software, operating systems, and common application software, the VP, Infrastructure shall mitigate risk by ensuring backup/redundancy of the affected systems/applications.

3.1.3.4. Asset Inventory

The IS Functional Area Controllers will confirm that new assets are captured in the Asset Tracking Management System. Physical IT hardware & software assets should be validated against the Asset Tracking System at least twice in each fiscal year.

3.1.4. Disposal (Asset Off-boarding)

The disposal of IS assets shall conform to the procedures herein, other relevant company guidelines, industry best practices, and Federal, state, and local statutes/regulations.

3.1.4.1. Environmental Impact

Environmental impact must always be considered when disposing of assets containing or composed of potentially hazardous materials.

3.1.4.2. Approved Waste Handlers

IS tangible assets shall be disposed of only through approved waste handlers or recyclers in accordance with governmental statutes and regulations.

3.1.4.3. Disposal Readiness

IS Functional Area Controllers will work with the IS Leadership to determine if an asset is ready for disposal and to confirm steps for asset disposal. Prior to disposal, IS Functional Area Controllers shall ensure either personally or by certification of designated disposal vendor the removal/destruction of all hard drives, data, and images and thorough sanitation of computers and equipment.

3.1.4.4. Valid disposal processes include:

- Reuse or reclamation for infrastructure assets
- Return to vendor at lease expiration
- Return to vendor for failure to perform or nonconformance to specifications/requirements
- Disposal of software per vendor procedure
- Sending purchased asset to an EPA (Environmental Protection Agency) approved recycler
- Ensuring that assets are designated as retired in the Asset Tracking Management System and the Finance Department is notified to retire fixed assets.

3.1.5. Verification

The IS Functional Area Controllers will conduct periodic assessments of IS tangible assets to ensure inventories are accurate and up to date. Nonconforming assets will be flagged for removal using the appropriate disposal procedure(s).

3.2. IS Asset Standards

3.2.1. Development of Asset Standards

Asset standards will be developed for all owned/leased equipment/systems controlled by Information Services.

3.2.2. Review of Asset Standards

Standards will be periodically reviewed by the CIO or his/her designee; the Information Services VP's, the IS Functional Area Controllers; and other IS personnel designated by the CIO as integral to the asset life cycle process. Standards development and update will take into account pertinent company procurement and acquisition policies, departmental resource planning, industry best practices, customer satisfaction, security requirements, and internal/external audit findings.

3.2.3. Exceptions

Requests for exceptions to standards will be routed through the impacted IS Functional Area Controllers and approved by the VP of the functional area. The IS Program Office shall maintain the current standards listing, CSISAM001-01L, IS Asset Standards List.

3.3. Implementation of Assets

IS technical support personnel and contractors shall install, configure, repair, upgrade, and replace IS assets. The IS Functional Area VP will ensure that IS asset standards are met.

3.4. Assessment of Asset Standards

C&S Wholesale Grocers, Inc. and Subsidiaries

Standards will be reviewed at least once a year to ensure that they are current and complete. The IS Assets Standards List will be updated immediately to reflect identified changes.

3.5. Asset Life Standards

The determination of asset life will be a balance between total cost of ownership and performance. Assets will not be replaced simply because newer technologies become available. The benefits of upgrade/replacement must clearly offset any increase in cost. Where company financial standards exist, they will be the principal determining factor in establishing asset life.

3.6. Established Computing/Mobile Device Asset Life Standards

The following specific asset life standards have been identified within the company's information technology environment:

- Desktop Personal Computers – 5 years
- Laptop/Notebook Personal Computers – 5 years
- Mobile Devices (smart phone, cell phone, PDA) – 2 years
- Enterprise Storage – 3 Years
- Enterprise Server Systems – 5 Years
- Enterprise Networking – 5 Years
- Enterprise Printing Systems – 5Years
- PC Tablets – 3 Years

Note: personal devices are not currently a company supported computing type.

3.7. Portable Computers and Mobile Devices

Due to the portability of laptop computers and mobile communication devices, their pervasive use throughout The Company, and their ability to store and transmit volumes of sensitive information, these asset types warrant specialized treatment within the asset management system. Details pertaining to the administration of the mobile device program are contained in CSISAM002 Mobile Device Management.

3.8. Warehouse Technology Assets

Assets deployed at C&S Warehouses to support warehouse operations, such as mobile computers, scanners, voice selection units, scan guns, printers, etc. are subject to this policy and must follow the Warehouse Asset Repair Process.

3.9. Securing Warehouse Technology Assets

Warehouse operations management will ensure that Warehouse Technology assets are properly secured and stored. Where deployed, Apex lockers should be used.
