## 1. Purpose

To ensure that all actual or suspected incident(s) occurring within the Information Services production environment are promptly identified, reported, investigated, and resolved in a manner that is commensurate with the degree of severity of the incident.

## 2. Management Responsibilities

It is the manager's responsibility to ensure that his/her direct-report employees, interns, contractors, and/or third-party workers are aware of, and agree to abide by, the Company's requirements for Incident Management and that incidents are handled in accordance with the requirements of this policy.

## 3. Incident Management Policy

### 3.1. Incident Classification

An incident is an event occurring within the Company's Information Services Production environment that adversely impacts business operations. Incidents are classified based on the overall business impact using the definitions below.

#### 3.1.1. Critical Severity Incident

A critical severity incident is an incident that meets the following criteria:

- Critical applications, services, servers, or network components unavailable
- E-mail unavailable due to wide-spread e-mail system outage or error
- Application failure which results in inability to receive/enter orders, receive/ship product, or bill/receive payment; or produces inaccurate information in mission critical areas
- A widespread service interruption that affects customers and/or vendors
- Widespread virus or other attacks on systems; attacks on the information infrastructure or core business applications including e-mail, domain name servers, major public-facing websites / server or network access points
- Disaster or loss of facilities, resulting in service interruption to critical systems
- Any event with an estimated revenue loss or cost to the business that exceeds \$50K
- Any event adversely impacting a Very Important Person (VIP) (Note: Unless one or more of the other critical criteria are met, this type of event does not require a root cause analysis)
- Security breach affecting the operation of corporate systems or the loss or disclosure of confidential information

#### 3.1.2. High Severity Incident

A high severity incident is an incident that meets the following criteria:

- IS service interruption within a business day when multiple users have the same problem
- Application or database corruption resulting in errors impacting the validity of financial data, delaying the financial close beyond published schedule, or resulting in an inability to produce required filings on time
- Product changes requiring business user intervention to have IS modify code or systems which are time sensitive and cannot be slated for future enhancements.
- IS Physical security breach, i.e. unauthorized people gaining access to data centers
- IS asset damage more than \$25K but less than \$50K
- VIP (Very Important Person) service request (Note: if the request involves adverse impact, it is classified Critical not High)
- Redundant, fail-over power sources unavailable
- Local Area / Wide Area Network access issue that reduces redundant network access
- High Availability servers for business-critical applications not available
- Dual connectivity to Storage Area Network of the servers for redundancy is lost

#### 3.1.3. Medium Severity Incident

A medium severity incident is an incident that meets the following criteria:

- IS service interruption within a business day when a few users have the same problem
- Loss or damage to back up tapes transported to off-site data vault
- IS asset damage under \$25K
- E-mail unavailable for a few users who can defer real-time, written communication to other departments, customers, and vendors

# C&S Wholesale Grocers, Inc. and Subsidiaries

- Single user below senior executive level unable to perform necessary business functions

## 3.1.4. Low Severity Incident

A low severity incident is an incident that meets the following criteria:

- Assisting business users in area which does not affect ability to perform daily functions
- Single, users below Senior Executive level unable to perform non-critical business functions
- Any other incidents not meeting Medium or above criteria

## 3.2. Incident Response

An incident's classification denotes its relative severity which dictates the escalation protocols to follow.

### 3.2.1. Critical and High Incident Response

Critical and high-level incidents will be responded to immediately with all necessary resources brought to bear on prompt resolution.

### 3.2.2. Medium and Low Incident Response

Medium and low-level incidents will be resolved on a timely basis in accordance with established service level agreements and expected response rates.

## 3.3. Incident Management and Handling

### 3.3.1. Incident Management Processes

Documented procedures must exist for all Incident handling and response processes, which include:

- Discovery and reporting
- Initial analysis and classification
- Containment
- Notification and escalation
- In-depth analysis and response

### 3.3.2. Incident Reporting

Any Information System User who discovers a potential incident may contact Help Desk Operations to report it. Incidents should be reported to Help Desk Operations via telephone (603) 354-7500 or via e-mail to [helpdesk@cswg.com](mailto:helpdesk@cswg.com). An Incident Ticket will be created in the automated ticket tracking system to document incidents from initiation through closure.

### 3.3.3. Incident Analysis & Classification

Incidents within the scope and knowledge of the Help Desk Operations Analyst taking the initial call or reviewing the web form or e-mail will be resolved upon receipt and closed on completion (usually within 5 – 15 minutes). Incidents beyond the expertise of the Help Desk Operations Analyst will be routed to the appropriate Solver Group for classification and resolution.

### 3.3.4. Incident Containment

Containment is always a primary consideration for critical and high-level incidents. Every effort must be made to provide an immediate fix within the resolution times outlined in the following matrix:

| Severity | Expected Resolution Time | Notification Requirements                                                                                                                                                                                                                                                     |
|----------|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Critical | 2 Hours                  | Clock starts immediately (7 x 24) upon confirmation that the incident is critical. If it becomes clear that the 2-hour target is unachievable, a new estimate will immediately be communicated to impacted Business parties and key IS personnel by the Solver Group Manager. |
| High     | 8 Hours                  | If it becomes clear that this target is unachievable, a new estimate will be communicated to impacted Business parties and key IS personnel by the Solver Group Manager prior to the end of the 8 hour resolution window.                                                     |
| Medium   | 3 Business Days          | If it becomes clear that this target is unachievable, a new estimate will be communicated to the incident reporter by the Solver Group Lead.                                                                                                                                  |
| Low      | 10 Business Days         | If it becomes clear that this target is unachievable, a new estimate will be communicated to the incident reporter by the Solver Group Lead.                                                                                                                                  |

# C&S Wholesale Grocers, Inc. and Subsidiaries

## 3.3.5. Incident Notification & Escalation

Any user of corporate information services may report an incident. This would include internal Business users, external customers, IS personnel, and contractors supporting IS systems and functions. Depending on the level of severity, the reporting of an incident will trigger the following events:

| Severity | Communication Method               | Timing                                             | Escalate to & Update on Progress                                                |
|----------|------------------------------------|----------------------------------------------------|---------------------------------------------------------------------------------|
| Critical | Telephone/E-mail                   | Immediate Notification<br>Response 15 minutes      | Help Desk Operations<br>Solver Group<br>IS Service Quality Manager              |
|          |                                    | Escalation 15 minutes                              | IS Functional Area VP<br>SVP, Information Services<br>IS Incident Response Team |
| High     | Phone/Pager                        | Immediate Notification<br>Response 30 minutes      | Help Desk Operations<br>Primary On-call                                         |
|          |                                    | Escalation 30 minutes                              | Solver Group Lead                                                               |
|          |                                    | Escalation + 2 hours                               | Responsible Director, Sr. Director,<br>IS Functional Area VP                    |
| Medium   | Automated Incident Tracking System | Immediate Notification<br>Response 1 Business Day  | Help Desk Operations<br>Solver Group Lead                                       |
| Low      | Automated Incident Tracking System | Immediate Notification<br>Response 3 Business Days | Help Desk Operations<br>Solver Group Lead                                       |

## 3.3.6. Business Interruption Notification

The Business must be notified of any Critical incidents which cause a business interruption. The notification must address the nature of the problem, its business impact, location(s) affected, when the incident occurred, and any other information considered relevant to the Business.

## 3.3.7. Sending of the Business Interruption Notice

Once an incident is deemed critical and a determination is made by the Business or IS that the incident is impacting business operations a Business Interruption Notice will be sent. Interim updates will be sent for critical incidents which are not resolved within the established time limit. These will be provided whenever substantive changes in incident status occur. A follow-up notice will be sent immediately following incident resolution

## 3.3.8. Incident In-Depth Analysis

### 3.3.8.1. Timing of In-Depth Analysis

Depending on the nature and complexity of the incident, detailed analysis may be accomplished during the initial analysis phase. However, for critical or high-level incidents whose resolution is time sensitive, a detailed analysis may need to be deferred until after initial containment.

### 3.3.8.2. Root Cause Analysis

Because of the serious actual or potential impact to the IS environment, every critical incident, excluding those related to exclusively servicing a VIP request or ones precipitated by external factors such as natural disasters, vendor issues, or utility outages, needs to be thoroughly analyzed to determine root cause. The analysis process for each incident will be tracked and documented via a Root Cause Analysis (RCA) form. If a Solver Group Team believes an RCA is not needed, this needs to be coordinated and approved by the IS Server Quality Manager.

**3.3.8.3.** The IS Service Quality Manager will facilitate the creation of the Root Cause Analysis by the appropriate Director, Sr. Director, or VP who has primary responsibility for the incident area. The responsible Director or above will generate the Root Cause Analysis as soon as possible, but no later than 3 business days following the incident. He or she will notify the IS Service Quality Manager when this is accomplished, so it can be verified and incorporated into the consolidated Root Cause Analysis report.

**3.3.8.4.** If root cause resolution requires additional work or follow-up, an additional ticket (Problem Resolution Ticket) will be opened on all critical or high-level incidents to track Root Cause Analysis activities. This ticket will be completed when the follow up work is finished, and the root cause has been resolved.

## 3.3.9. Incident Ticket Closure

# C&S Wholesale Grocers, Inc. and Subsidiaries

All incident tickets will be closed upon resolution by the responsible solver group. At incident closure, the ticket needs to include pertinent information known at the time of closure regarding the reason for and the resolution for the issue the ticket was opened for.

## 4. Roles and Responsibilities

| Role                                              | Responsibility                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Help Desk Operation Manager                       | The front-line manager responsible for the applications and personnel engaged in initial identification and classification of incidents.                                                                                                                                                                                                                                                                                                                                      |
| Help Desk Operations                              | The personnel and systems designated as the first line of support for receiving, classifying, and disseminating incidents impacting information services that support business operations.                                                                                                                                                                                                                                                                                    |
| Incident Response Team                            | The Incident Response Team is comprised of IS Directors, Senior Directors, and VP's. The team is responsible for driving the process and ensuring that required resources are promptly engaged in resolving the immediate issue and follow-on problem resolution ticket. The IS Service Quality Manager has lead responsibility for driving the process within this group.                                                                                                    |
| IS Service Quality Manager                        | The individual assigned overall responsibilities for overseeing the process of managing incidents within the IS environment.                                                                                                                                                                                                                                                                                                                                                  |
| Manager of IS Security & Compliance               | The Manager of IS Security & Compliance has responsibility for ensuring adherence by internal and external resources to policies and procedures instituted within the Information Services environment.                                                                                                                                                                                                                                                                       |
| Senior Vice President (SVP), Information Services | The SVP, Information Services is responsible for all IS functions including applications and infrastructure. He or she acts as liaison to the Senior Executive Staff when critical or high-level incidents occur.                                                                                                                                                                                                                                                             |
| Solver Group Team (SGT)                           | The working level group of IS and Business personnel tasked to resolve a critical or high-level incident. Group composition can vary, but will always include the principal ticket assignee and a team lead.                                                                                                                                                                                                                                                                  |
| Ticket Assignee                                   | The programmer, analyst, or other IS designee having primary responsibility for resolving and closing an incident. The responsibility for closing the ticket includes not just changing its status, but also thoroughly documenting within the ticket the events surrounding the incident from initial identification through resolution. The ticket assignee is responsible for ensuring these elements are completely addressed prior to marking the ticket <i>Closed</i> . |
| Vice President (VP), Distributed Technology       | The VP, Distributed Technology has executive responsibility for the IS Security & Compliance area.                                                                                                                                                                                                                                                                                                                                                                            |

## 5. Definitions

| Term                                    | Definition                                                                                                                                                                                                         |
|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Automated Incident Tracking Application | A third party or internally developed, computer-based system for initiating, communicating, and monitoring disposition of incidents impacting the Information Services Production Environment.                     |
| Business                                | A generic organizational term defining company departments, areas, and agencies outside of Information Services. This would include: Merchandising, Procurement, Warehousing, Finance, Human Resources, and Legal. |
| Business Interruption                   | An event or series of events that impacts one or more Information Services systems, precipitating a delay in the conduct of normal business operations for one or more areas of the Business.                      |
| Customer                                | An entity serviced by the company that generates income. Although internal business units are sometimes referred to as customers, within the context of this policy, customer means an external revenue source.    |
| Escalation                              | A systematic, time-driven process for ensuring that significant IS incidents are addressed promptly and that key decision makers are included in the process.                                                      |

# C&S Wholesale Grocers, Inc. and Subsidiaries

| Term                                     | Definition                                                                                                                                                                                                                                                                                                                                   |
|------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| First Level Help Desk Operations Support | The initial point of contact within a help desk operations support hierarchy tasked with diagnosing the nature of incidents and requests. The first level responder assigns or validates incident priorities, and when the incident solution is within his or her expertise, assists the requestor in implementing the appropriate solution. |
| Incident                                 | An event or correlated series of events which disrupt the normal functioning of the Information Services Production Environment.                                                                                                                                                                                                             |
| Incident Severity Classification         | A set of evaluation criteria employed to categorize the relative degree of impact a particular event has upon the IS Production Environment. The degree of severity can range from low to critical. A detailed discussion of the evaluation criteria is contained in Section 5.3 of this document.                                           |
| Incident Ticket                          | The initial form opened in the Help Desk Operations workflow automated incident tracking application to address an immediate situation. It serves as the vehicle for tracking a speedy resolution to this situation.                                                                                                                         |
| Problem Resolution Ticket                | A follow-on form opened within the Help Desk Operations workflow application which addresses the underlying problem that triggered the initial incident. A problem resolution ticket is needed to track the research effort when the fundamental cause of the incident is not readily apparent.                                              |
| Root Cause Analysis                      | The diagnostic process used to ascertain the event or series of events precipitating an incident, and the subsequent recommendations implemented to prevent incident recurrence.                                                                                                                                                             |
| Service Level Agreement                  | A parameter or set of parameters for a particular application or system which the customer and IS mutually agree constitutes acceptable performance.                                                                                                                                                                                         |
