C&S Wholesale Grocers, Inc. and Subsidiaries

1. Purpose

To ensure that all changes to the Information Services (IS) Production Environment (hardware, software, applications, operating systems, networks, and infrastructure) are actively managed in line with our business requirements.

2. Management Responsibilities

It is the manager's responsibility to ensure that his/her direct-report employees, interns, contractors, and/or third-party workers are aware of, and agree to abide by, the Company's security requirements for changes to the Company's production systems and that changes are carried out in accordance with the requirements of this policy.

3. Production Change Management Policy

3.1. General Change Management Requirements

Changes to the Company production environments must be controlled and include:

- Consideration to business, technical, and operational impact
- Appropriate coordination of IS resources
- Adherence to and maintenance of Operational procedures and documentation
- Performance of acceptable levels of testing
- Assessment and mitigation of risk
- Review by the Change Advisory Board (CAB)

3.2. Request For Change (RFC) Classifications

3.2.1. Standard Changes

Normal or typical changes introduced to the production environment that must be assessed and either rejected or approved in accordance with the requirements of this policy.

3.2.2. Scheduled Emergency Change

A change of the highest priority that requires immediate evaluation, assessment, and approval which the Business deems urgent or IS recommends in order to avoid a system outage.

3.2.3. Unscheduled Emergency Change

Unscheduled Emergency Changes are changes that must be implemented immediately and meet the following criteria:

- A change needed to address a major disruption in processing, impacting the IS Production Environment and/or The Company's ability to transact core business functions, that requires immediate corrective action to continue.
- An immediate change required to restore one or more elements of the Production Environment stemming from a critical or high severity incident that needs to be resolved immediately.

3.3. Production Promotion Windows

3.3.1. Standard Production Promotion Window

A production promotion window is a periodic, scheduled implementation date/time window during which changes are promoted to production. In addition to regular, recurring maintenance windows, separate windows are established to implement standard changes for major Company business entities or enterprise-level systems that lend themselves to packaging of production changes into discrete time intervals. Such cycles are established for the purposes of minimizing disruption to production environments and maximizing efficient use of limited resources. The CAB shall maintain an up-to-date listing of production promotion schedules for standard changes.

3.3.2. Emergency Production Promotion Windows

Scheduled emergency changes do not have to wait for the standard production window and can be implemented during the next scheduled emergency change window. The CAB shall maintain an up-to-date listing of production promotion windows for emergency changes.

3.3.3. Unscheduled Emergencies Production Promotion Windows

Unscheduled emergency changes by their nature are implemented as soon as possible and will not wait for the standard production promotion window or an emergency change window.

C&S Wholesale Grocers, Inc. and Subsidiaries

3.4. RFC Date Change Approval Requirements

Any modification to the scheduled implementation date or time of an approved Request for Change (RFC) requires new approvals from the original approval IS authorities before implementation can proceed.

3.4.1. Rationale for Re-approval

Changes to RFC implementation dates alter the risk profile of the change, resource coordination requirements, compliance posture and audit trail, and business impact assessment.

3.4.2. Requirements for Date Changes

When RFC dates are modified, the following new approvals must be obtained:

- VIP1 approval (from the IS tower that owns the change)
- VIP2 approval (from a secondary tower)
- Business VP approval
- Any other approvals specified in the original RFC

3.4.3. Documentation Requirements

All date changes must include

- Clear justification for the date modification
- Updated risk assessment if applicable
- Confirmation that all stakeholders have been notified
- Updated audit trail reflecting the change rationale

3.5. Request for Change (RFC) Types

3.5.1. Simplex Change

A simplex change does not require a formal RFC and can be implemented without CAB involvement; however, simplex changes must still follow standard ticketing practices. Examples of Simplex changes include:

- 3.5.1.1. Configuring Sandbox, DEV, and QA hardware that is not currently in a production state
- 3.5.1.2. Resetting passwords
- 3.5.1.3. Changing application security roles where custom programs are NOT involved
- 3.5.1.4. Training users on simple system functionality
- 3.5.1.5. Changing e-mail distribution lists
- 3.5.1.6. Adding PC's to the network
- 3.5.1.7. Loading PC Software
- 3.5.1.8. Granting access to share drives
- 3.5.1.9. Replacing/changing tape drives in the tape library
- 3.5.1.10. Data updates where custom programs are not involved
- 3.5.1.11. Turning up/down and testing of circuits that are not currently in a production state

3.5.2. Complex Change

Complex changes must follow the established change review and approval process described throughout this policy. Examples of complex changes include:

- 3.5.2.1. Configuration changes
- 3.5.2.2. All code changes
- 3.5.2.3. Software application installations
- 3.5.2.4. Changes to application security roles where custom programs ARE involved
- 3.5.2.5. Data destruction
- 3.5.2.6. Job scheduling changes/additions
- 3.5.2.7. Hardware Installations (Server, Network, etc.)
- 3.5.2.8. Hardware / software upgrades
- 3.5.2.9. Operating system patches
- 3.5.2.10. Network circuit additions/deletions/modifications
- 3.5.2.11. Firmware upgrades to production environments
- 3.5.2.12. Decommissioning of production servers or applications
- 3.5.2.13. Data updates where custom programs are involved
- 3.5.2.14.
- 3.5.2.15.

C&S Wholesale Grocers, Inc. and Subsidiaries

3.6. Request for Change Classifications

All RFC's require one of three classifications: high, medium, or low. Additionally, a fourth classification, critical, may be used in extreme circumstances such as those associated with Unscheduled Emergency Changes.

3.6.1. Critical Priority Change

Changes or enhancements to vital applications, services, or network infrastructure which are essential to conduct business, are needed for regulatory purposes in a rapid timeframe, will generate significant profits or loss reductions if acted on quickly, or impact a substantial portion of the company's customer or user base. Critical RFC's have an implicit sense of urgency and/or involve one or more considerable risk factors that normally dictate they be completed in a matter of hours.

3.6.2. High Priority Change

The setup or enhancement of a system or application which is needed to carry out important business functions in a short timeframe. High priority changes are significant ones that usually are completed within the next scheduled window or inside a dedicated maintenance window.

3.6.3. Medium Priority Change

The setup or enhancement of a system or application which is needed to carry out business functions in a medium timeframe. Medium changes are ones which, while important to the Business, can normally be executed over the course of two weeks.

3.6.4. Low Priority Change

The setup or enhancement of a system or application which is needed to carry out business functions that needs to be implemented within a reasonable timeframe but is not overly time sensitive. The timeframe for low priority changes will vary based on other workload and Business need and will be communicated to the requestor's Business unit. This communication will include the option for the Business to reprioritize activities being performed by IS for them in order to accelerate accomplishment of the change.

C&S Wholesale Grocers, Inc. and Subsidiaries

3.7. Request For Change Handling

3.7.1. Request for Change Initiation

Requests for Change originating with the Business or from external vendors/customers are initiated by either contacting Help Desk Operations or the appropriate IS Solver Group. All complex change requests are logged into the automated change tracking system by the contacted party. Requests for Change received by Help Desk Operations will be routed to the appropriate Solver Group for review and disposition. In addition to entering requests from their Business or customer/vendor partners, IS shall also input directly into the automated change tracking system RFC's that involve internal systems or applications.

3.7.2. Request for Change Tracking

All complex changes are logged into the automated change tracking system tracked via the CAB and are subject to post implementation review.

3.7.3. Solver Group Management Responsibilities

The Solver Group Manager is responsible for ensuring that the RFC:

- 3.7.3.1. Is accurate, complete, and has the necessary approvals
- 3.7.3.2. Is assigned a due date, RFC start date, RFC start time, priority, and the appropriate queue
- 3.7.3.3. Has been thoroughly assessed in terms of impact
- 3.7.3.4. Contains evidence of user acceptance testing/concurrence
- 3.7.3.5. Is properly coordinated with all stakeholders

Any discrepancies or clarifications need to be coordinated with the IS Directors or above and Business Process Owners/Leads.

3.7.4. Testing of Changes

Application changes must be tested in a Quality Assurance environment (if available) by both IS and the requestor. After successful testing, the Business Process Lead gives approval for the change prior to submitting an RFC.

3.7.5. Business Coordination of Changes

All Production changes, whether they are application or infrastructure, require engagement of the impacted Business functions. Approved changes may be implemented, provided impacted Business functions concur. It is the responsibility of the change initiator and his or her Solver Group Lead to ensure Business involvement in the change validation and approval process and to document this involvement as part of the RFC.

- 3.7.5.1. In the case of application changes, the Business should be an integral part of acceptance testing.
- 3.7.5.2. In the case of complex infrastructure changes, where it is not feasible to engage them in testing/validation, the Business must still be informed of changes involving their functions.
- 3.7.5.3. In the case of Downtime, Downtime periods are negotiated with the impacted Business unit(s) via the Business Process Lead(s), and approved by the CAB.
- 3.7.5.4. If the change is an Internal IT change, a manager or above from the impacted tower should provide approval as business approval.

3.7.6. Standard Change Approval Requirements

All Standard Changes require:

- 3.7.6.1. Solver Group Manager Approval
- 3.7.6.2. Approval from two senior IS staff members (VIP1 & VIP2) and
- 3.7.6.3. CAB approval prior to implementation.

While a member of the manager's Tower Management Team is preferred for VIP1 approval, where none of these individuals are available, any authorized IS VIP approver may serve as the VIP1 approver. Additionally, the VIP 1 and VIP 2 approvals should be from different functional groups.

3.7.7. Standard Change Workflow

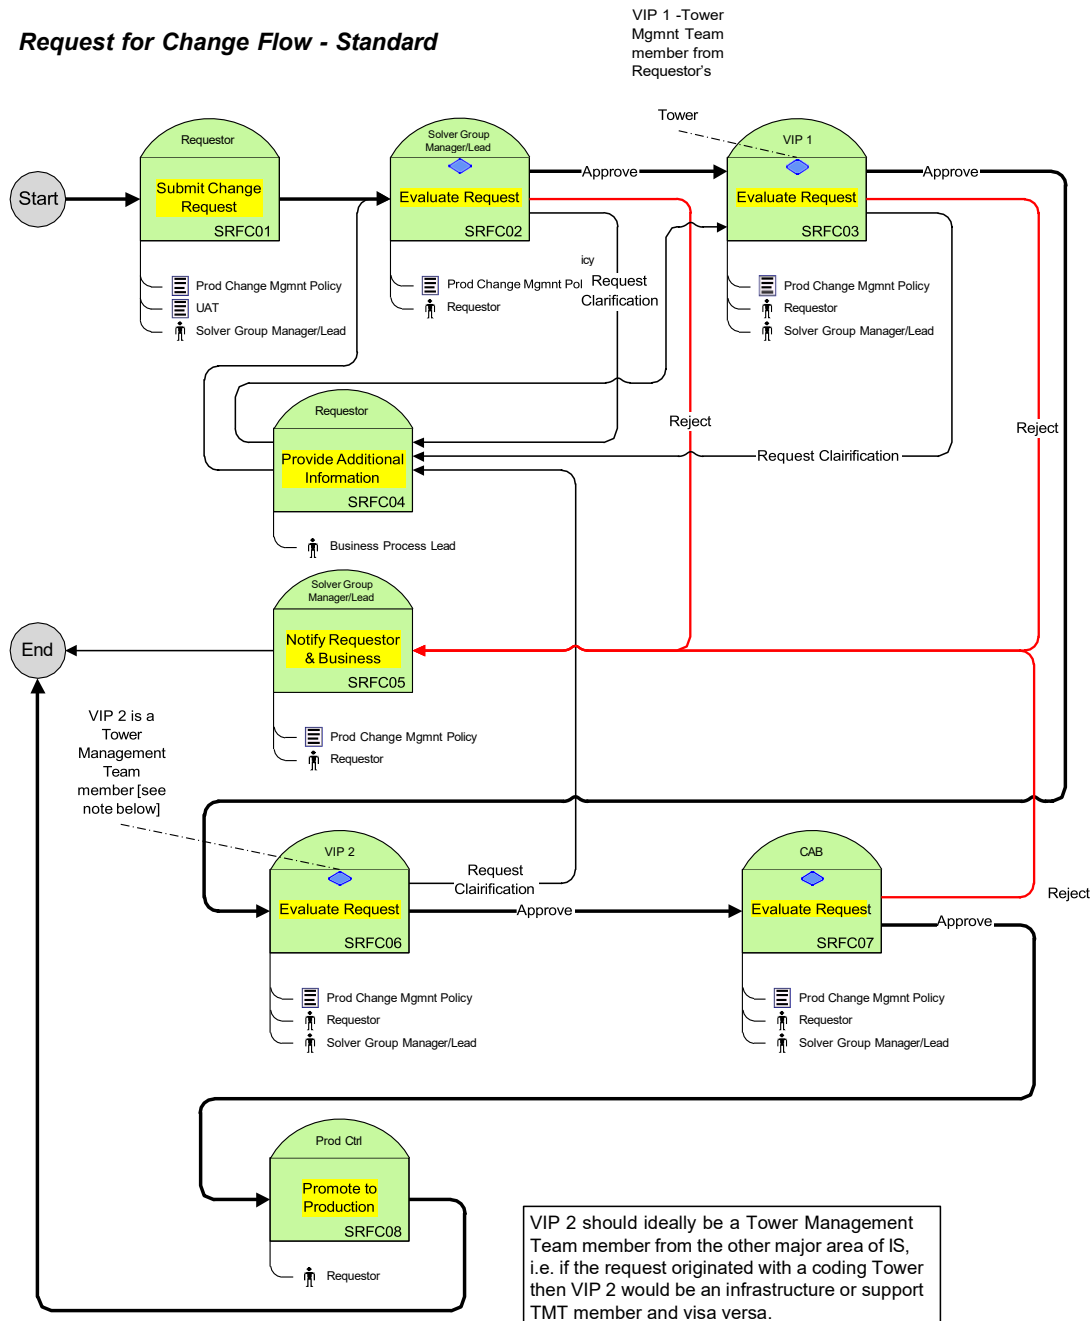

The workflow for standard changes is as follows:

1. Requestor Submits RFC via change tracking system
2. Requestor obtains a Peer Review and then routes the RFC to the Solver Group Manager/Lead
3. The Solver Group Manager/Lead evaluates the standard RFC
4. If the Solver Group Manager/Lead approves the standard RFC, the RFC is routed to a member of his/her Tower Management Team for VIP1 approval.
5. Upon receiving VIP 1 Approval, the Solver Group Manager/Lead routes it to for VIP 2 approval. The VIP 2 approval should be from another major area of IS.
6. After receiving VIP 2 approval, the Solver Group Manager/Lead submits it to the CAB for review.

C&S Wholesale Grocers, Inc. and Subsidiaries

7. If the CAB approves the change, the change can be promoted to production at the applicable change window.

Request for Change Flow - Standard

3.7.8. Scheduled Emergency Change Approval Requirements

All Emergency Changes require:

- 3.7.8.1. Appropriate Business VP/GM review and approval
- 3.7.8.2. All Standard Change Approval Requirements
- 3.7.8.3. CIO Approval or 2 IS VP's

3.7.9. Scheduled Emergency Changes Workflow

The workflow for emergency changes is as follows:

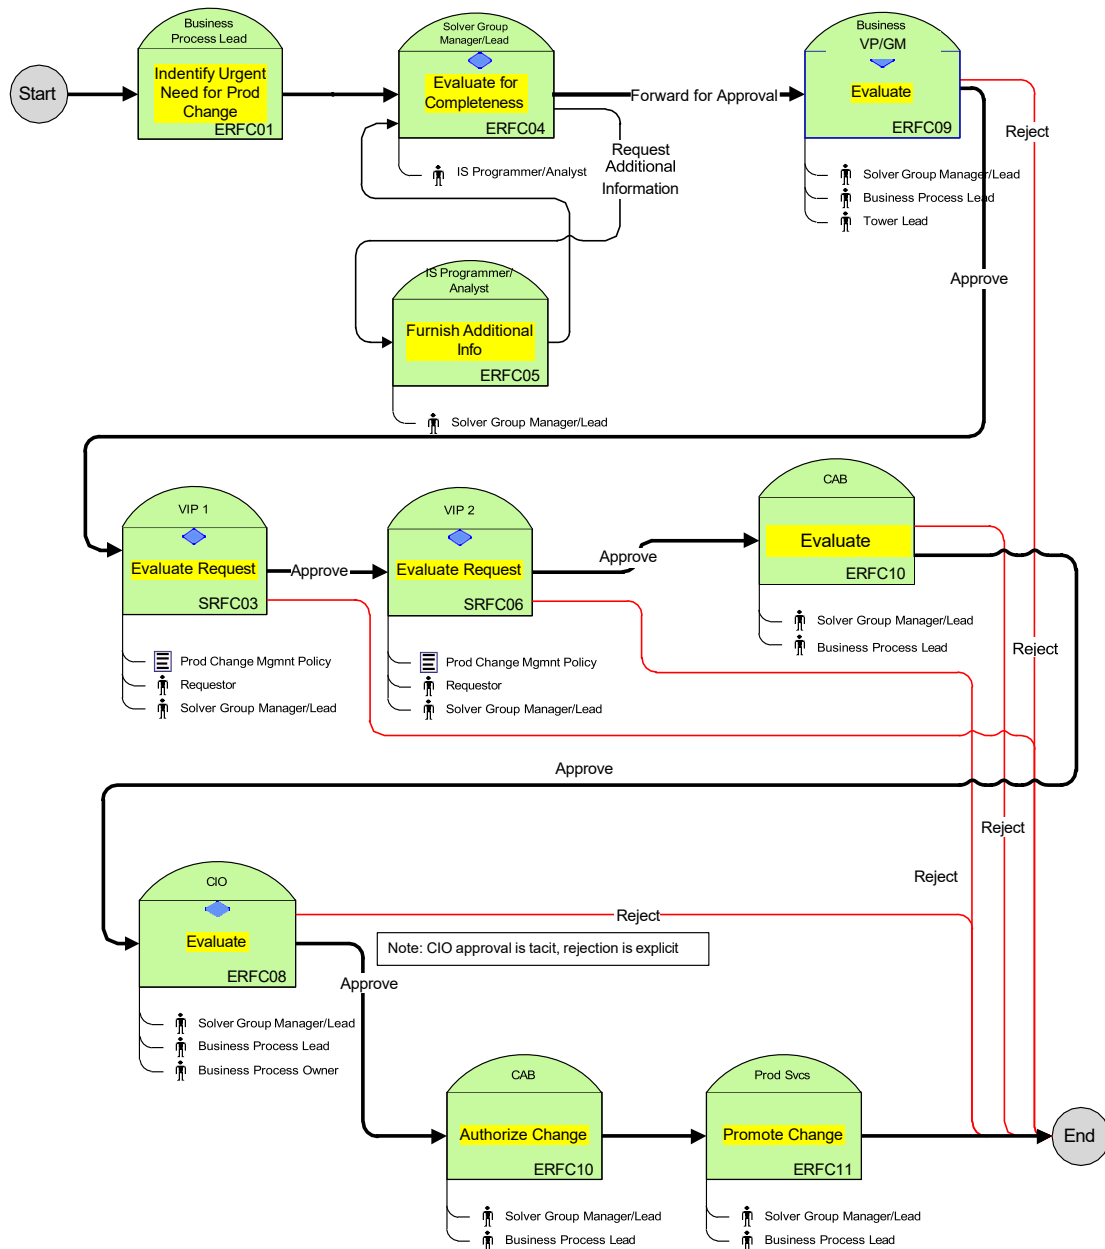

1. Requestor Submits RFC via change tracking system
2. Requestor obtains a Peer Review and then routes the RFC to the Solver Group Manager/Lead
3. The Solver Group Manager/Lead evaluates the Emergency RFC

C&S Wholesale Grocers, Inc. and Subsidiaries

4. Prior to approvals by VIP's, the scheduled emergency change is routed to the applicable Business VP/GM for review and approval. Evidence of this approval is incorporated into the change
5. If the applicable Business VP/GM approves the RFC, the Solver Group Manager/Lead routes the RFC to a member of his/her Tower Management Team for VIP1 approval.
6. Upon receiving VIP 1 Approval, the Solver Group Manager/Lead routes it to for VIP 2 approval.
7. After receiving VIP 2 approval, the Solver Group Manager/Lead submits it to the CAB for review.
8. At this point, the CAB will review the change and reject or tentatively approve it. If approved the CAB routes it to the CIO for approval (If two IS VP approvals are attached, then it does not need to be routed to the CIO)
9. The CIO retains final approval authority and may override CAB approval if he or she deems the change insufficiently justified or detrimental to the production environment. If approved by the CIO, the CAB authorizes the change and the change can be promoted to production at the applicable emergency change window.

C&S Wholesale Grocers, Inc. and Subsidiaries

Request for Change Flow – Scheduled Emergency

3.7.10. Unscheduled Emergency Changes

Unscheduled Emergency Changes are executed upon discovery of a severe production issue or security vulnerability. Due to the urgency of this type of change, approval may be granted post implementation; however, the responsible Tower Lead will be notified verbally or via e-mail prior to change implementation. Unscheduled Emergency changes should be put in "RFC Install Complete" status until ALL required approvals have been given, including CAB approval. All unscheduled emergency changes require a post implementation review by completing the "Unscheduled Emer RCA Form" and presenting it during the weekly RCA meeting for approval.

C&S Wholesale Grocers, Inc. and Subsidiaries

3.7.11. Notification to User Community

All planned changes that result in an outage require advanced notification to the user community affected. Notification, communication, and coordination will normally be accomplished via the appropriate Business Process Lead(s).

3.8. Change Advisory Board

To ensure that changes to Company production environments are controlled and implemented in accordance with Company policies, a permanent Change Advisory Board (CAB) shall be established.

3.8.1. CAB Membership

CAB membership will consist of:

- 3.8.1.1. IS Tower Management Team members
- 3.8.1.2. Business Process Leads from all major Business functional areas

3.8.2. CAB Meetings

The CAB shall meet to review, assess, approve or deny changes. The attendees must include permanent IS members or their appointed representatives and the CAB Facilitator. Business Process Leads are encouraged to attend or send empowered representatives but are not required to do so. However, they will be engaged in all aspects of changes originating from their respective functional areas. Representatives for each change being reviewed during a specific CAB meeting will attend in person or via telephone to discuss the details of the change and answer questions. Normally, these will be the developers/technicians responsible for implementing the changes or their managers/Solver Group Leads.

3.8.3. CAB Main Responsibilities

The responsibilities of the CAB are to:

- 3.8.3.1. Establish and maintain control over all changes to the Production Environment
- 3.8.3.2. Develop, document, and promulgate a change control framework that specifies the policy, procedures, and processes, including:
 - 3.8.3.2.1. Roles and responsibilities;
 - 3.8.3.2.2. Classification and prioritization of all changes based on business risk;
 - 3.8.3.2.3. Assessment of impact;
 - 3.8.3.2.4. Authorization and approval of all changes by the business process owners and IS;
 - 3.8.3.2.5. Tracking and status of changes.
- 3.8.3.3. Establish appropriate record management practices and audit trails to record key steps in the change control process.
- 3.8.3.4. Monitor closure of changes and elevate and report to management those that are not closed in a timely fashion.
- 3.8.3.5. Assess all requests in a structured fashion.
- 3.8.3.6. Ensure that the assessment process addresses impact analysis on infrastructure, systems, and applications.
- 3.8.3.7. Consider security, legal, contractual, and compliance implications of the requested change.
- 3.8.3.8. Consider interdependencies amongst changes.
- 3.8.3.9. Involve business process owners in the assessment process as appropriate.
- 3.8.3.10. Ensure that the change control process identifies both the business and technical needs for the change.
- 3.8.3.11. Verify that changes are formally approved by business process owners and IS stakeholders, as appropriate.
- 3.8.3.12. Establish a process to allow business process owners and IS to request changes to infrastructure, systems, or applications.
- 3.8.3.13. Develop controls to ensure that all such changes arise only through the change control process.
- 3.8.3.14. Ensure that Emergency changes are processed in accordance with the Emergency change element of the formal Change Control process.
- 3.8.3.15. Verify that emergency access requestors/grantors adhere to appropriate temporary authorization, documentation, and post implementation revocation procedures.
- 3.8.3.16. Conduct post-implementation reviews of a representative sample of Standard and Scheduled Emergency changes, involving all concerned parties (All Unscheduled Emergency Changes undergo a rigorous review via the root cause analysis process described in CSISSD001 Incident Management). Reviews should consider implications for aspects such as further application system maintenance impact on development and test environments; application software development quality; documentation and manuals; and data integrity.
- 3.8.3.17. Ensure that a documented process exists within the overall change control process to declare, assess, authorize and record an emergency change.

C&S Wholesale Grocers, Inc. and Subsidiaries

- 3.8.3.18. Establish a process to allow requestors and stakeholders to track the status of requests throughout the various stages of the change management process.
- 3.8.3.19. Ensure that documentation including operational procedures, configuration information, application documentation, help screens, and training materials follows consistent change management procedures and is an integral part of the change.

3.9. Change Blackouts

There are designated change freezes during the year for each of the major holidays. No standard changes are allowed to be implemented during the freeze. If a change is needed, a scheduled emergency RFC may be opened but must include the following requirements.

3.9.1. Blackout Requirements

- The RFC priority must be HIGH or CRITICAL.
- Explain how the RFC will prevent an impact to financial systems, receiving orders, shipping orders, paying employees or vendors. This verbiage should be included in the description.
- Describe why this change cannot wait until after the blackout period with details. This verbiage should be included in the description.
- Attach Business VP approval stating the exact date and time of the proposed change and the total duration of the change.
- Attach 2 VP VIP approvals AND CIO approval signing off on the change

3.10. Record Retention

Change records will be retained in accordance with all applicable company/department retention policies/directives and for a period of current fiscal year plus six months unless other company/department policies or directives specifically dictate a lengthier retention period.

4. Roles and Responsibilities

Role	Responsibility
Change Advisory Board Facilitator	The Change Advisory Board (CAB) Facilitator has administrative responsibility for the day-to-day management of changes to Production and reporting of requests to IS management and affected personnel. He or she: • records and communicates all CAB decisions and changes to all interested parties, primarily through taking and distributing meeting minutes; • arranges communication regarding planned weekly changes to all of IS on a weekly basis; • produces periodic and ad hoc reports to keep the staff informed of change activity.
Chief Information Officer (CIO)	The CIO is the supreme authority for approving Emergency Change Requests.
Solver Group Manager	Solver Group Managers coordinate and track all RFC's within their Solver Groups. They are responsible for ensuring that all RFC's are accurately recorded, correctly prioritized, and appropriately coordinated. They function as the initial evaluators, working in concert with their Business counterparts, in determining whether a change is Standard or Emergency.
IS Director & Vice President	IS Directors & Vice Presidents (VP) are responsible for reviewing all RFC's.
IS Associate	IS Associates are responsible for working with customers until their problems are resolved, coordinating user acceptance testing, and gaining requestor approval prior to moving changes to Production.
Business VP	A business subject matter expert at the Vice President level or above who has the knowledge to assess the impact of a requested production change and determine whether it warrants emergency treatment.

C&S Wholesale Grocers, Inc. and Subsidiaries

Role	Responsibility
Business Process Lead	Business Process Leads are subject matter experts designated by the Business Process Owners. Business Process Leads are responsible for facilitating alignment between their respective Business units and IS. Individuals performing this role are expected to maintain an enterprise-wide viewpoint, supporting overall company business objectives while ensuring conformance to IS best practices. Business Process Leads should contribute their experience and expertise in business processes to assist IS in developing optimum solutions to meet business objectives. They work with Business users and IS to define business requirements, solve issues, drive continuous improvement, and develop solution alternatives. Among other things, Business Process Leads will: • Act as key customer and functional contacts between Business units and IS to identify, prioritize, and manage systems issues, continuous improvements, and initiatives. • Assist IS in developing technological standards that reduce cost and complexity within the enterprise. • Possess a firm grasp of the Business issues and data challenges as they pertain to the information services environment. • Suggest areas for improvement in internal processes by articulating business requirements. • Initiate or review system change requests, and work with IS to deliver solutions. • Develop business cases for system enhancements where needed. • Work with IS on proposed system solutions and changes to ensure they are in line with business requirements and objectives for their functional areas. • Lead testing efforts from the Business side and obtain sign-off by process owners. • Ensure issues are identified, information is provided and solutions are tested in a timely manner for their respective Business units. • Assist in enforcement of deadlines and schedules within their Business units. • Assist in communicating system changes to their functional areas and facilitate mutual understanding between IS and the Business units concerning business needs and expected outcomes. • Represent their Business units in the "Change Control" function and attend the Change Advisory Board meetings (see CAB responsibilities). • Provide feedback to the Business on IS activities and initiatives.
Tower Management Team	A Tower Management Team consists of an IS Tower Lead plus any members of his or her higher echelon managerial staff designated to participate in the change management process as senior IS approvers. Members are empowered to review and approve changes in accordance with Section 4 of this policy. The members of a Tower Management Team are appointed by the senior member of that tower. Directors and above are eligible to be part of a Tower Management Team, but must be officially designated by the Tower Lead. Tower Leads must formally notify the CAB Facilitator of any changes to the composition of their Tower Management Team.

5. Definitions

C&S Wholesale Grocers, Inc. and Subsidiaries

Term	Definition
Automated Incident Tracking Application	A third party or internally developed, computer-based system for initiating, communicating, and monitoring disposition of incidents impacting the Information Services Production Environment.
Automated Change Tracking System	A 3rd party application designed to monitor changes and workflows within the production environment.
Automated Request for Change	An electronic version of an RFC that can be approved and reviewed via established workflows and approval circuits contained in the automated change tracking system.
Change Advisory Board (CAB)	The corporate body which has review and approval authority for changes impacting the company's IS Production Environment.
CAB Meeting	The CAB Meeting is a periodic review of change progress and planning preparation. This meeting addresses significant changes impacting both applications and the IS infrastructure.
Complex Change	A modification to the Information Services Environment which, if not managed holistically and in a controlled manner, could have a direct or indirect negative effect on service availability.
Emergency Change	An Emergency Change is a time sensitive change that must occur outside the standard change review process to preclude adverse impact to business functions.
Holiday Blackout Window	A predetermined period of time preceding and following holidays/special events during which production change implementation is essentially frozen. During these periods only Emergency RFC's will be implemented. A calendar of the blackout periods is developed by the CAB and published prior to the first blackout period of the Fiscal Year.
IS Tower	A collection of related/complimentary technological functions within the Information Services Department that form the basis for a sub-department organizational entity such as: • Application Development • Corporate Systems • Customer & Procurement Systems • Infrastructure Operations, Security & Compliance
Post Implementation Review	A formal examination of production change implementation results after the change has been implemented.
Production Promotion Window	A production promotion window is a periodic, scheduled implementation date/time window during which changes are promoted to production.
Project Go-Live	Project go-live is the culminating milestone of a project which entails moving one or more components into the Production Environment. Project Go-Lives are major events controlled through the System Development Life Cycle process, and are not constrained by normal production windows.
Request for Change (RFC)	A physical or electronic document defining the scope, impact, and risks associated with a change to an application or infrastructure.
RFC Types	The classification of the requests for change, Standard or Emergency as defined in the policy.
Service Level Agreement (SLA)	A formalized consensus between the customer and IS that specifies or quantifies with regard to solutions and tolerances; a collection of service level requirements, negotiated and mutually agreed upon by the service provider and the customer.
Simplex Change	A simplex change is a modification to the Information Services Environment that has very localized and limited impact.
Solver Group	An Information Services entity comprised of individuals dedicated to supporting one or more systems or functions essential to the collection, processing, and distribution of information necessary to the successful conduct of business activities.
